

Summer Science Fun for Preschoolers

These simple activities can start your preschooler on a path to science-based learning!

Collect objects as you tour your neighborhood with your child. See how many different rocks you can find, or count the different flowers you see. Talk about how the birds make nests for babies and listen to bird songs.

(Learning is Everywhere)

Experiment with magnets. Give your preschooler a refrigerator magnet and see where she can make it stick. Talk about what all the objects have in common.

(Kindergarten, Here I Come!)

Read with your preschooler the 2014 PA One Book, *Stripes of All Types* by Susan Stockdale. Ask questions about the animals and where they live. Ask your child if he/she would like to live there too, and why or why not!

(Learning is Everywhere)

Help your child plant bean or flower seeds in a small can or cup. Put the container in a sunny place. Water it with your child every day. Watch what happens!

(Kindergarten, Here I Come!)

Put out a container for the next rain. Ask your child, "What do you think might happen if we leave this container in the rain?" Keep the container in the rain and revisit it later. Discuss what you and your child observe.
