## Different Kinds of Volcanoes

Read and answer the questions.

There are three main types of volcanoes.

- Cinder cone volcanoes are built from burning cinders and ash. They have steep sides and a wide, bowl-shaped opening.
- Shield volcanoes are made from lava flows. They are low and dome-shaped. They have very gentle slopes.
- Composite volcanoes are built from burning cinders, ash, and lava flows. They are very tall and have high, peaked tops.

1. What two things form a cinder cone volcano? \_\_\_\_\_
